📄 ABOUT ME

I'm a self-taught software engineer passionate about software development and expertise in languages such as Golang and Python. Skilled in automating tasks, crafting tools and developing platforms (e.g., web applications using Golang), and active participation in open-source projects.

📁 CARRER HISTORY

Infrastructure & Back End Developer, QubitOrbit

11/2025

- Building backend systems and developer tooling for the platform.
- WIP ...

Dubai

Backend Developer, Private Company

07/2024 – 12/2024

- Maintained advanced ffmpeg wrapper for video encoding backend with golang
- Converted a PHP backend monolith app with new microservice architecture using golang

Software Engineer, Private Company

03/2023 – 05/2024

- Developed platform panels to identify vulnerabilities and display detailed information about hosts and their services. Utilized Golang for performance and ReactJS for reusability.
- Developed a crawler-like agent & C2 using Golang and Docker containerization SDK to systematically search through hosts, identify services, and pinpoint vulnerabilities along with their CVEs.
- Enhanced our Agent's capabilities by integrating a custom Nmap library using Golang for performant host scanning, service identification, and detection of open ports.
- Automated and containerized projects to streamline deployment, facilitating seamless integration into DevOps workflows.

Backend Developer, Private Company

10/2022 – 03/2023

- Developed and implemented a role-based access control system for a server-side application, including CRUD operations. to ensure secure and efficient management of user permissions and data access.
- Implemented Restful API architectural style for a web application, designed and developed API endpoints. Collaborated with the front-end team to ensure seamless integration of the API with the web application.
- Developed a custom API for a machine vision application using the Pypylon library, allowing for real-time monitoring and control of Basler camera temperature.
- Developed and maintained technical documentation for Linux and web projects, providing clear and concise instructions for other team members to follow.

Linux Administrator, Private Company

10/2021 – 09/2022

- Developed Python automation scripts for embedded systems projects in the field of car plate detection.
- Developed a Python module for interacting with a PHP-based web interface to control Docker containers.
- Implemented Network File System (NFS) on a large-scale enterprise network with multiple locations. Utilized NFS protocols and technologies to improve file access times and ensure data integrity.
- Implemented security measures such as firewall rules and permissions management to protect sensitive data on the NFS network.

- Developed Bash scripts for automating the deployment of Linux OS images on multiple servers simultaneously.
- Worked with Linux OS images such as Ubuntu, Cent OS, LFS and Debian.

SKILLS

Programming Languages

- Golang
- Python
- JavaScript
- Bash

DevOps & Tools

- Linux
- Docker
- GitLab CI/CD
- RabbitMQ
- Kafka

Databases

- PostgreSQL
- MongoDB
- MySQL

Frameworks

- ReactJS
- NodeJS

PROJECTS

namira-core [↗](#), A high-performance, self-hosted quality assurance toolkit for VPN proxy configurations. Namira Core validates, benchmarks, and ranks VMess, VLESS, Trojan, and Shadowsocks connections with real TCP handshakes and latency measurements.

06/2025

XRayGen [↗](#)

XRayGen for generating XRay JSON configs and automation xray deployment process in the server-side

CFScanner [↗](#)

Cloud Flare Scanner, i wrote golang section of this project

gfwKnock [↗](#)

Bypass GFW detection with packet fragmentation method PoC written in Golang

Github Search Cli [↗](#)

Github search api written in python for searching through github contents

DjangoMQ [↗](#)

DjangoMQ is a restful api which sends & receives messages with RabbitMQ / AMQP protocol

SonarPing [↗](#)

A Multi-Ping tool for sending ICMP requests written in python

CERTIFICATES

- Programming in Golang
University of California,
Irvine [↗](#)

- Programming in Python,
Meta [↗](#)

- Version Control, Meta [↗](#)

SOFT SKILLS

- **Communication:** Proficient in conveying complex technical concepts and solutions to technical and non-technical audiences.
- **Adaptability:** Demonstrated ability to quickly adapt to changing project requirements, technologies, and team dynamics, ensuring efficient project execution and delivery.
- **Team Collaboration:** Effectively contributing to team environments by fostering a supportive and inclusive atmosphere, and leveraging collective strengths to drive project success.
- **Time Management:** Strong organizational skills combined with the ability to prioritize tasks and manage time effectively, ensuring the timely completion of projects while maintaining high-quality standards.

LANGUAGES

Persian — Native/Bilingual

English — Proficient

Turkey — Basic
